

EPI Suite[®]

PRO

The premier photo ID card software solution for large organizations

- Smart face finding feature for consistent images on each ID
- Dual-sided card design
- Unlimited records
- Includes a database
- Magnetic stripe, barcode and smart chip encoding
- Multiple ID cards per person
- Fifteen images per person
- Create and delete cards in batches
- Guard station feature

EPI Suite Pro by ImageWare Systems is the leading photo ID card software solution for large organizations with multi-user network installations that need to cost-effectively issue, manage, produce and control thousands of secure ID cards.

What sets EPI Suite Pro apart is its ability to efficiently manage large amounts of data, images and card designs, so users don't have to. Users can track and issue multiple cards per person; automatically populate multiple cards with one person's data, eliminating redundant data entry; and conduct a variety of batch operations like re-issuing, updating, printing or adding groups of cards all at once.

To enhance security measures, EPISuite Pro comes equipped with a guard station feature that enables guards or front office personnel to quickly check cards against a secure database of cardholder information, ensuring only valid cardholders gain access to a facility. Additional security features include the ability to encode data to barcodes, magstripes and smart chips; create multi-user security accounts; and enhance cards with hard-to-replicate

design features such as microprinting, infrared bar codes and transparency or fading effects.

EPI Suite Pro can be seamlessly integrated into human resource, time and attendance and access control systems to eliminate duplicate data entry and automate card production from these systems. An integration guide is included to guide Visual Basic and C++ Programmers through the integration process.

EPI Suite Pro is ideal for large or multi-facility corporations, government organizations, transportation companies, public utilities and universities.

Capture.

Making a great looking photo ID card just got easier with ImageWare's smart face finding technology. When capturing a photo, EPI Suite Pro automatically locates the face, then centers, crops and enhances the quality of the image, ensuring consistent, professional-looking photos for every ID card. ImageWare has also developed a custom camera driver that captures a photo and transfers it into the database in just one click, significantly speeding and simplifying the ID card enrollment process.

EPI Suite Pro can store as many as 15 images per person. These images can include not only digital photos, but fingerprints, signatures and more. In addition to digital photos, EPI Suite Pro can work with photos that are scanned, captured live with a camcorder or imported from a file system database. A Wizard-driven utility assists users with importing images and/or text information from other databases.

Design.

With EPI Suite Pro, you don't need a degree in graphic design to produce attractive ID cards. EPI Suite Pro comes with ten pre-configured card designs—or users may custom create an unlimited number of full-color, dual-sided card designs.

EPI Suite Pro also comes with a variety of design tools that enable users to: add bar codes and magnetic stripes to card designs; import graphics for backgrounds; add logos and text; apply fading or transparency levels to images; convert images to gray scale or black and white; and use a mesh pattern feature to provide a ghosting or "watermark" effect. Backgrounds can even be removed from photos, giving them a floating effect. Designs can also include areas that contain header/footer information and exclusion areas to prevent ink from being applied over security features such as smart chips, holograms or signature pads.

EPI Suite Pro also enables users to make global edits to layouts and will automatically resize all elements to adapt with a new printer, with no manual editing whatsoever.

Manage.

Unlike other ID software products on the market today, EPI Suite Pro manages person information separately from card information, which makes searching for and sorting records faster and easier. Additional database management tools

enable users to assign multiple cards to one person without having to re-key person data; conduct searches and sort information based on user-definable parameters; enter person information into the system before assigning a card type; and search for and reprint cards in seconds. Searches can range from simple to complex and can be saved for quick future reference. And EPI Suite Pro is password protected for added security.

Print & Encode.

EPI Suite Pro accommodates dual-sided and batch printing; prints multiple cards per sheet; and will encode bar codes, magnetic stripes and smart chips inline with the printing process. When encoding cards, users simply need to select the printer model being used—no additional configuration is required.

In addition to ID cards, EPI Suite Pro can print a number of reports including: audit reports, detail reports on cards by their format type; cards printed by date; database image statistics; personnel detail and image reports; card detail reports; reports on people in the system without images; and many others.

Minimum System Requirements:

Windows 98SE & NT 4.0: Pentium I Class Computer, 32 MB RAM
 Windows 2000 Professional & XP Professional: Pentium II Class Computer, 64 MB RAM
 CD-ROM drive
 100 MB free disk space
 20 KB per person
 100 Bytes temp space per database record
 16-bit color or higher SVGA graphics
 800 x 600 screen resolution
 1 parallel or USB port
 Mouse

Optional:

Frame or video grabber board (compatible with Video for Windows or TWAIN, and SVGA card)
 TWAIN compliant scanners or fingerprint acquisition devices
 TWAIN or VFW compliant digital cameras
 TWAIN or WIntab compliant signature devices

Ask about our custom services

- Biometric, bar code & encoder plug-ins
- Incorporation of background checks
- Web-based remote enrollment applications
- 3rd party integration with Access Control and HR Systems
- Plus many more
